EIFL Digital Research Literacy Training Programme Outline for Librarians

Release: November 2020
Last update: December 2023
Introduction

Digital research literacy comprises the knowledge and skills required to produce quality research outputs in a digital environment.

To support university and research libraries that are helping researchers and students to produce quality research outputs, EIFL compiled a training programme outline, which is organized according to the research cycle, and held 12 webinars to support use of the training outline.

We would like to acknowledge all the people, organizations and projects whose resources are included in the outline. Our special thanks go to the staff of the University of Dublin College Library, especially Julia Barrett, who helped us to create this resource.

How can librarians use this resource?

This resource is organized according to the research cycle: Discover, Manage Research Data, Publish, Disseminate and Increase Visibility, and Measure Impact.

Each section gives an overview of the topic, what the trainer should cover, and what the learner should gain by the end of the training. Each topic includes “Resources for facilitators and learners”, with useful material that trainers and learners can use to improve their own knowledge or use in their own training.

We encourage you to become familiar with this training programme and to adapt and use relevant topics to train librarians, students and researchers. In addition to using the content provided in this training programme, we suggest you follow the recommendations below on how to plan, organize and evaluate your training.

EIFL Open Science train-the-trainer course materials. URL: https://openplato.eu/course/view.php?id=62

If you would like to suggest new content and resources for consideration, please contact us at: info@eifl.net
DISCOVER
Find your topic and review literature
Search Google and Google Scholar
Free discovery tools and platforms
Manage your references
Keep up to date on your topic

MANAGE RESEARCH DATA
Managing and sharing research data
Writing a data management plan (DMP)

PUBLISH
Academic integrity
Choosing effective publishing strategy
Using Open Access (OA) routes to increase research impact

DISSEMINATE AND INCREASE VISIBILITY
Institutional repository
Preprints
Persistent identifiers for research outputs, researchers and institutions:
DOIs, ORCID and ROR
Social media for research

MEASURE IMPACT
Introduction to research metrics
Make your work count
Research Lifecycle – Discover

This section helps students and researchers to identify their research topics; to plan and perform a literature review; to run searches using free tools; to use reference/citation management tools, and how to stay up to date with chosen research topic.

We identified five topics that researchers and students must know well:
- Find your topic and review literature.
- Search Google and Google Scholar.
- Free discovery tools and platforms
- Manage your references.
- Keep up to date on your research topic.

Find your topic and review literature

This training outlines a process for selecting a research topic, narrowing the topic down to a specific research question, and carrying out literature review.

By the end of this training, learners should:
- Be able to define a research topic.
- Be able to conduct a literature review.

Training Outline:
- Select a topic for your research.
- Collect background information about your topic.
- Define your topic as a focused research question.
- Perform a literature review.

- “Research Worksheets and Handouts”. College of Dupage. URL: https://codrc.org/IL/handouts

Search Google and Google Scholar

This training outlines effective searching techniques when using Google, Google Scholar and other Google resources. It also provides tips for evaluating search results.

By the end of this training, learners should:
- Be able to conduct effective searches on Google and Google Scholar using advanced search options and limits.
- Be able to evaluate search results.

Training Outline:
- How to conduct effective searches of Google using advanced search options and limits, for example:
  - Building search strings using Google functionality
  - Using Google limits e.g. by site, filetype and type of resource material
  - Using operators
  - Filtering search results
  - Setting up alerts
- How to conduct effective searches of Google Scholar, for example:
  - Planning and building searches
  - Following a citation trail and searching within that trail
  - Generating citations
  - Saving articles to your Scholar Library; downloading articles from your library
  - Setting up alerts
  - Link to your own library’s subscriptions
  - Improve Google Scholar’s functionality by linking to Publish or Perish
- Use of other Google services such as Google Books and Google News.
- Evaluating authority and websites - evaluating the quality of websites located and the authority of an author.

- “Sample Exercises for practicing Google and Google Scholar”, University College Dublin. URL: https://www.eifl.net/sites/default/files/resources/sample_exercices_google.docx
- Always check Google Scholar website for tips, as they are mostly up to date:
  - Google Scholar Email alerts: https://scholar.google.com/intl/en/scholar/help.html#alerts
Free discovery tools and platforms

This training outlines various freely available discovery tools and platforms to locate theses and dissertations, freely available journal articles, books, images, newspapers, statistics and datasets, patents, etc.

By the end of this training, learners should:
● Be familiar with various discovery platforms and subject repositories to locate content in open access and know their functionalities.
● Know how to find open access versions of publications.

Training Outline:
● Disciplinary/subject repositories such as PubMed Central and Europe PMC (Biomedical and Life Sciences), arXiv (Physics, Mathematics, Computer Sciences, Quantitative Biology, Quantitative Finance, Statistics, Electrical Engineering and Systems Science, and Economics), Humanities Commons (Humanities), etc.
● Discovery platforms to locate theses and dissertations, freely available journal articles, books, images, newspapers, statistics, datasets, such as Open Access Button, BASE, CORE, OATD, DART Europe, OpenAIRE Explore, GoTRIPLE, re3data, The Lens.
● Using AI based literature review tools: potential and limitations.
● Websites to find images, such as Wikimedia Commons, Pixabay, etc.
● Browser extensions to find open access articles, such Unpaywall, Open Access Button, Google Scholar Button, CORE Discovery, Kopernio; using Zotero to find open access articles thanks to integration with Unpaywall.

Resources for facilitators and learners

Videos, examples of presentations, practical exercises and tip sheets:
● Joe Mcarthur. “Delivering Open Access content”, Open Access Button. URL: https://docs.google.com/presentation/d/1jhHW7Bxe7Ok68viDU2oZYjF3HmGukYCL9XzyjILogRA/export/pptx
● Sample Exercises for practising DART Europe, BASE, Registry of Research Data Repositories and the Creative Commons Image Portal: https://www.eifl.net/sites/default/files/resources/sample_excercises_dart.docx
● “How can I get access to the article I need”, EIFL clickable tip sheet. URL: https://www.eifl.net/resources/eifl-poster-how-can-i-get-access-article-i-need
● “AI-Driven Search Engines: A Comparative Study”, SLA Europe. URL: https://www.youtube.com/watch?v=dCwh3-Voea4
Manage your references

This training provides an overview of a range of freely available and other tools researchers can use to manage their references, such as Mendeley, Zotero and JabRef. The purpose is to assist researchers in deciding which service is appropriate for their specific needs.

By the end of this training, learners should:

● Have good knowledge about reference management.
● Be familiar with tools for reference management.

Training Outline:

● Why referencing is important - avoiding plagiarism and verifying sources used.
● An overview of free tools Mendeley, Zotero and JabRef. (If your institution has subscribed to EndNote or RefWorks, teach learners how to use those tools).
● Notable features of each tool and a comparison of the tools.

Keep up to date on your research topic

Keeping current with new research can be a challenge. This training will cover strategies and tools that can be used to help researchers stay up to date with the published literature in their topic.

By the end of this training, learner should:

- Know how to keep up to date with new research in their area using email alerts, RSS Feeds, Table of Contents (TOC) Alerts and Conference Alerts.
- Be familiar with online tools (social media, blogs, podcasts, email lists) that can help them to keep up to date with research.

Training Outline:

- How to identify the main sources of current awareness in your area.
- How to effectively use these sources to stay abreast of developments in your area.
- How to create saved search alerts for new articles and dissertations on your topic.
- How to set up Table of Contents alerts for your favourite journals.
- How to use RSS feeds.
- How to find out when a key article has been cited by someone else.
- How to use social media tools such as blogs and Twitter to hear the buzz around new research.

Example of presentation slides:

Research Lifecycle – Manage Research Data

Research data management (RDM) refers to the organization, storage, preservation, and sharing of data that was generated or collected and used in a research project. RDM is a good research practice and many research funding agencies now require researchers to develop data management plans and share research data underlying publications. Managing and sharing research data is a very complex area. This section aims to equip researchers and students with data management knowledge and skills that support the long-term preservation, access, and reuse of data.

We identified two topics that researchers and students should know well:

- How to manage and share research data, including data protection and ethics, open licensing, FAIR data.
- Writing a data management plan (DMP).

Managing and Sharing Research Data

This training covers the key issues involved in managing research data and the overall benefits of following best practice in this area.

By the end of this training, learners should:

- Understand which data they can make open and which need to be protected.
- Understand the FAIR and CARE data principles.
- Be able to select which data to keep and find an appropriate repository for them.
- Understand funder requirements regarding data.
- Understand what personal data are and how they can protect them, what to consider when developing consent forms, how to store data securely and how to anonymize data.
- Understand how to re-use data and how to select the appropriate licence for their data.
- Understand research data management for basic quality assurance, replicability and reusability.
- Learn tips for how to get maximum impact from their research data.

Training Outline:

- Why data management is important. What are the efficiencies and the drivers (micro / macro)?
- Data organization, documentation and metadata.
- Data storage and back-up.
- Legal and ethical requirements.
- Data sharing and re-use.
- Long-term preservation.
- FAIR and CARE data principles.
- Data management responsibilities.
Resources for facilitators and learners

Online courses:
- As this is a complex area, to deepen your knowledge, we suggest you complete five short courses developed by FOSTER:
  - “Managing and Sharing Research Data”, FOSTER. URL: https://www.fosteropenscience.eu/node/2328
  - “Data protection and Ethics”, FOSTER. URL: https://www.fosteropenscience.eu/node/2330
  - “Open Licensing”, FOSTER, URL: https://www.fosteropenscience.eu/node/2415
  - “Assessing the FAIRness of data”, FOSTER. URL: https://www.fosteropenscience.eu/node/2644
  - “Use open data in teaching”, FOSTER. URL: https://www.fosteropenscience.eu/node/2656

Book:

Writing a data management plan (DMP)

This training builds knowledge about management of research data and provides practical skills for writing data management plans.

By the end of this training, learners should:
● Know how to write a data management plan.
● Gain confidence in research data management.
● Have information about existing tools and templates.

Training Outline:
● Overview: What are research data and why should you manage them?
● Ethical and legal considerations.
● Data types.
● Data organization, documentation and metadata.
● Data storage and back-up.
● Data sharing, re-use and long-term preservation.

Research Lifecycle – Publish

A well thought through publishing strategy leads to increased impact of research. This section helps researchers and students to develop effective strategies for publishing their research. It reviews the open access publishing environment and advantages of various open access routes in making research publications more visible and citable.

We identified three topics that researchers and students should know well:
- Academic integrity.
- Choosing an effective publishing strategy.
- Using open access routes to increase research impact.

Academic integrity

Academic integrity is the commitment to and demonstration of honest and moral behaviour in an academic setting. This is most relevant at the university level as it relates to giving credit to other people when using their ideas and work, by acknowledging their contributions. Academic integrity training addresses concepts such as plagiarism and citing, copyright and fake news.

By the end of this training, learners should:
- Understand expectations for sound academic writing, avoiding plagiarism, and appropriate referencing and citation.

Training Outline:
- Key concepts of citation, quotation, plagiarism, referencing, paraphrasing.
- Tips for sound academic writing and avoiding plagiarism.
- How to use plagiarism detection software subscribed by the university. If a university does not have the subscription, show free tools for researchers to use.
- Referencing and citation styles.
- How to identify false and misleading information.

Articles:
● Chérifa Boukacem-Zeghmouri. “Predatory journals entrap unsuspecting scientists. Here’s how universities can support researchers”. Nature. 620, 469 (2023). DOI: https://doi.org/10.1038/d41586-023-02553-1

Choosing an effective publishing strategy

There are many different channels for publishing research, including journal articles, books, book chapters, reports and blogs. The training briefly covers book publishing, and examines journal publishing in more depth. It also looks at how researchers can maximize the impact of their research through a variety of means such as collaboration, increasing discoverability and visibility, and how to communicate, promote and monitor research output.

By the end of this training, learners should:
● Have the knowledge and skills needed to build an effective publishing strategy.

Training Outline:
● Selecting a book publisher.
● Selecting a journal.
● Maximizing the impact of your research through:
  o Ensuring you are easily identifiable
  o Ensuring your research output is visible
● Promoting & Monitoring your research outputs:
  o Social media (e.g. blogs, Twitter, social networks)
  o Tracking citations and mentions of your work

Using Open Access (OA) routes to increase research impact

This training covers the OA environment, its drivers and how researchers can take advantage of the various OA routes to get their research output more visible and citable.

By the end of this training, learners should:

● Understand how to publish their work openly and be aware of the advantages of OA.

● Understand different OA models.

● Understand rights retention.

● Be able to find an OA publishing option for their research.

● Know how to find a suitable repository to provide OA and archive their work.

● Know how to publish OA monographs.

● Understand funders’ expectations and policies on OA.

● Be aware of the options to secure funding for Article Processing Charges (APCs) where applicable, and available discounts or waivers.

Training Outline:

● OA drivers: increased discoverability, visibility and impact; funders’ requirements to deposit in an OA repository; publishers’ responses; rights retention.

● Get started with OA publishing by finding a suitable journal or a suitable repository for your publications.

● Diamond OA

● APC waivers and discounts.

● Your university’s OA / institutional repository – free and long-term stable access and storage; library services including copyright checking. If your university does not have a repository, you can raise awareness about shared OA repositories for depositing research outputs e.g. Zenodo.

Article:
Research Lifecycle – Disseminate and increase visibility

This section shows researchers and students how to increase the visibility of research outputs by making them freely and globally available.

We identified three topics that researchers and students should know well:

- Benefits of institutional repositories.
- How sharing preprints can improve research.
- The value of persistent identifiers for research outputs, researchers and institutions: DOIs, ORCID and ROR.

Institutional repository

The training explains how an institutional repository increases the visibility of research outputs by making them freely and globally available. It guides researchers through the process of uploading research outputs to an institutional repository, covers library services related to depositing research into an institutional repository, and describes the processes and workflows for submitting research outputs to a repository manager.

By the end of this training, learners should:

- Understand the benefits of institutional repositories and Library services to support researchers.
- Know about different versions of published research, and how to handle them.
- Be able to deposit research outputs in a research repository (if applicable).
- Understand the processes and workflows for submitting research outputs to a repository manager.

Training Outline:

- Introduction to institutional repository, its benefits, policies and workflows.
- Keeping the correct version of a published paper – Author Accepted Manuscripts (AAMs) or postprint (after peer review) in addition to a published version or a Version of Record (VoR).
- How to upload to the institutional repository (if authors in your institution deposit their articles into the repository themselves), including a demonstration and upload practice.
- Library services e.g. copyright checking, workflows in sending papers to the library for uploading into the institutional repository.

Resources for facilitators and learners

---

Preprints

This training demonstrates to researchers how sharing preprints can improve their research and support open science.

By the end of this training, learners should:
● Know what preprints are.
● Be able to find a suitable preprints platform to share their early findings.
● Understand the pro and cons of sharing preprints.
● Be aware of how sharing preprints can benefit their career progression.

Training Outline:
● What are preprints?
● What do your peers think about preprints?
● Weighing the pros and cons of preprints.
● Want to give it a try? Discipline-specific and general preprint repositories that you can use.
● Preprints in the time of COVID-19.

Persistent identifiers for research outputs, researchers and institutions: DOIs, ORCID and ROR

This training explains the benefits of persistent identifiers for research outputs, researchers and institutions: DOIs (Digital Object Identifiers), ORCID (Open Researcher and Contributor ID) and ROR (Research Organizations Registry). It outlines the ‘research nexus’ - a rich and reusable open network of relationships and scholarly records that the global community can build on, where metadata is the thread that is woven to produce such a network. It also covers the benefits of establishing a researcher profile, introduces the main research identifiers and provides deeper knowledge of ORCID (Open Researcher and Contributor ID), which is an internationally recognized, free and essential tool for author disambiguation. Organizational identity is presented via ROR - a global, community-led registry of open persistent identifiers for research organizations.

By the end of this training, learners should:

- Know about various persistent identifiers and the value they bring.
- Know about various online research profiles.
- Know how to use ORCID to manage research identity.
- Know how to use ROR to manage organizational identity.

Training Outline:

- Overview of persistent identifiers for research outputs, researchers and research organizations (DOIs, ORCID, RORs)
- Overview of researcher profile tools (ORCID, Scopus Author Identifier, Web of Science Researcher ID, Google Scholar Profiles).
- What is ORCID? How to make the most of your ORCID.
- What is ROR? How to use ROR?

Social media for research

Social media are becoming increasingly important as tools for publicizing research, for discovering new publications and ideas, and to engage in discussions with other researchers. This training introduces a selection of popular and useful social networks for academics and researchers.

By the end of this training, learners should:

- Understand the benefits of using social media for research.
- Be aware of the caveats.
- Know some of the more popular social networks and services for researchers.
- Know how to present themselves online.

Training Outline:

- Use of Social Media Tools and Networks to promote research.

Research Lifecycle – Measure Impact

Currently, there is no one tool or system that completely measures the impact of research. Each tool uses its own measurement systems and it is difficult to use these tools across disciplines that have different research and publication practices. This section will help researchers and students to become familiar with the most common ways of measuring research impact, highlighting limitations of traditional means of publishing and citation and introducing new approaches to research assessment and evaluation.

We identified two topics that researchers and students should know well:
- What are research metrics?
- How to measure research impact.

Introduction to research metrics

This training provides an overview of research metrics, how to use metrics appropriately, and their limitations. It is aimed at those with no or little prior knowledge of the area and explains the most commonly used quantitative (for example, citation-based) metrics, and the tools that can be used to calculate them, and qualitative expert judgement and peer review.

By the end of this training, learners should:
- Know how to use metrics appropriately.
- Be able to use multiple indicators to help to provide more robust information underpinned by data that is reliable, statistically valid, multi-faceted and its limitations understood.
- Learn how to use subject/field normalized indicators.
- Consider the appropriateness of any indicators used for non-English language research.

Training Outline:
- What are responsible research metrics
- Use and Misuse of citation-based metrics.
- Author & Article Level Metrics & Tools: Scopus, Google Scholar, Altmetric.com, Web of Science.
- Choosing Appropriate Metrics.

Make your work count

This training clarifies common sources of confusion about metrics, describes types of impact, introduces core metrics concepts and explores sources of metrics.

By the end of this training, learners should:
- Be able to choose appropriate types of research impact metrics for their scholarship.

Training Outline:
- Recognize the types of research impact metrics that can be applied to various forms of scholarship.
- Describe common tools for gathering research impact metrics and qualitative evidence for public scholarship.
- Be aware of the appropriate uses and limitations of citation metrics and altmetrics.
- Develop a strategy for gathering evidence of impact and value for your own public scholarship.
- Provide examples of how the library can support researchers and students in gathering evidence of impact.
